## Keyword Index, Volume 32 (2008)

- Acyl-enzyme, 167  
Alkaloids, 88  
All-alpha proteins, 233  
Alzheimer's disease, 332, 438  
Amino acid composition, 448  
Annealing time, 452  
*Anopheles*, 442  
Antiarrhythmic activity, 88  
Artificial neural network, 442  
Association, 332  
Automatic functional annotation, 375  
Autotrophy, 345  
Azoreductase, 191
- Bacterial genomes, 375  
Belief propagation, 375  
Beta-barrel, 298  
β-Helix, 102  
BII family, 159  
Binding pockets, 387  
Biochemical networks, 292  
Bioinformatics, 159  
Bioinformatics analysis, 256  
Biomarker detection, 417  
β-Lactamase, 167  
Bleaching, 311  
Blood coagulation pathway, 81  
BUBR1, 139
- $C_\alpha$  three-dimensional coordinates, 406  
*Canis familiaris*, 61  
Caribbean, 311  
Catalytic mechanism, 167  
Catastrophe, 141  
Cell organelles, 315  
Cellular biology, 315  
Centenarian, 332  
Chemical graph theory, 131  
Chemical master equation, 292  
Chemically reacting system, 240  
Chemotaxis pathway, 81  
Circular code, 400  
Circular dichroism, 167  
*Cis*-regulatory elements, 256  
Classification, 426  
Clustering, 243, 282  
Cochran-Armitage trend test, 391  
Comparative genomics, 159, 412
- Computational analyses, 61  
Computational analysis, 370  
Computational biology, 302  
Computational geometry, 212  
Computational method, 233  
Computational model, 273  
Computational simulation, 5  
Computer method, 400  
Computing, 462  
Conditional random fields, 287  
Conformational changes, 167  
Conserved motif, 191  
Conserved regulatory sequences, 111  
Constrained structural alignment, 264  
Coral growth, 311  
Coral morphology, 345
- Data embedding, 282  
Degree distribution, 1  
Degree-rank function, 1  
Delay final all possible steps approach, 240  
Delay stochastic simulation algorithm, 240  
Depth, 345  
Diagnosis, 438  
Discrete-time Markov chain, 292  
Discriminant analysis, 302  
Discrimination, 227  
Distance conservation, 433  
Distance metric learning, 438  
Distortions, 378  
Docking, 185  
Domain-domain interaction, 81
- E. coli*, 17  
Edit distance, 282, 287  
El Niño, 311  
Electroporation, 163  
Energy generation, 315  
*Entamoeba histolytica*, 67  
Entity recognition, 287  
Entropy, 17, 81
- Fatty acids, 139  
Feature selection, 29  
Fibrinogen-related proteins, 382  
Fragment molecular orbital method, 198  
Function classification, 122  
Functional classification of genes, 176

- Functional data analysis, 426  
 Functional principal component analysis, 426  
 GC content, 222  
 GC-rich, 452  
 Gene expression, 39  
 Gene expression data, 29, 53, 243  
 Gene networks, 131  
 Gene selection, 53  
 Genetic association, 391  
 Genome order index, 147  
 Genomic G + C content, 147  
 Genomic neighborhood, 176  
 Genotype–phenotype associations, 412  
 Global optimization model, 233  
 G-protein coupled receptor, 185  
 Gradient region, 141  
 Graph entropy, 131  
 Great barrier reef, 311  
 Growth factor, 338  
 Haplogroup, 332  
 Hardy–Weinberg disequilibrium, 391  
 HELFIT, 307  
 Helix bending, 378  
 Helix fitting, 307  
 Helix geometry, 378  
 Helix orientation, 370  
 Helix parameters, 307  
 Hemagglutinin, 198  
 Heptamer motifs, 433  
 Hes7, 48  
 Heterogeneity, 39  
 Heterogeneous data sources, 375  
 Heterotrophy, 345  
 Hidden periodicity, 17  
 Hill coefficient, 48  
 Histidine kinase, 218  
 HIV-1 cleavage site prediction rule discovery, 72  
 Homology, 458  
 Homology modeling, 185  
 HP-model, 248  
 Hrq1 sequences, 349  
 Human kallikrein-related peptidase 6 (tissue kallikrein 6/protease M/zyme/neurosin), 111  
 Human promoters, 433  
 Huntington's disease, 102  
 Hydrophobic cluster analysis, 349  
 Improved binary particle swarm optimization, 29  
 Influenza, 198  
 Information, 17  
 Information retrieval, 462  
 Information theory, 131  
 Innate immunity, 382  
 Integration, 458  
 Interdecadal, 311  
 Internal transcribed spacer 2, 442  
 Intraspecific variation, 345  
 IPCC, 311  
 Isochores, 147  
 Jackknife test, 448  
 KLK6 interactome, 111  
 K-means, 243  
*k*-Nearest neighbor, 298  
 Label propagation, 438  
 Landscape analysis, 248  
 Lateral transfer, 191  
 Liquid chromatography–tandem mass spectrometry (LC–MS/MS), 215  
 Local environment, 167  
 Luciferase reporter phage assay, 367  
 Machine learning techniques, 387  
 Malaria, 442  
 MAPK pathways, 81, 218  
 Mathematical model, 273, 452  
 Matrix method, 167  
 MAX2 test, 391  
 Meta-analysis, 39  
 Michaelis-Menten, 48  
 Microarray analysis, 462  
 Microarray data analysis, 417  
 Microarrays, 39  
 Micro-bio-factory, 315  
 MicroInspector, 222  
 MicroRNA, 222  
 miRNA, 61  
 Mitochondrial SNP, 332  
 Mitotic checkpoint, 139  
 Molecular dynamics, 102, 149  
 Molecular recognition, 198  
 Monte Carlo, 141  
 Mosquitoes, 382, 442  
 Motifs, 387  
 Multiclass classification, 417  
 Multiple sequence alignment, 282  
 Mycobacteriophage, 367  
 Na<sup>+</sup> channel modulator, 88  
 Na/K-ATPase, 5  
 Neighbour detection, 212  
 Network membrane models, 163  
 Network regulation, 462  
 Non-connective tissue, 338  
 Nucleosome positioning, 17  
 Nucleotide composition, 147  
 Octopamine receptor, 185  
 Omics, 462  
 Optimally weighted fuzzy *k*-nearest neighbor, 448  
 Orthologues, 111  
 Oscillation, 48  
 Outer membrane protein, 227  
 Palytoxin, 5  
 Paralogus cluster, 61  
 Parasite, 67  
 Parkinson's disease, 332  
 Particle swarm optimization, 53  
 Pattern recognition receptors, 382  
 PCR, 452  
 Phase diagram, 391  
 Phosphorylation, 5  
 Phylogenetic profiling, 412

- Phylogeny, 191  
Plant microRNAs, 400  
Polyglutamine, 102  
Population balance, 338  
Pore modeling, 163  
Prediction, 298  
Pre-mRNA 3'-end processing, 256  
Probabilistic graphical models, 375  
Prokaryotes, 176  
Promoter, 359  
Protein aggregation, 102  
Protein classification, 302  
Protein disulfide isomerase family, 67  
Protein fold, 233  
Protein folding, 233, 248  
Protein function prediction, 122  
Protein nucleic acid binding, 378  
Protein phosphatase 5, 139  
Protein phylogeny, 349  
Protein secondary structure assignment, 406  
Protein structure, 370  
Protein synthesis, 315  
Protein-DNA binding, 149  
Protein-protein interaction, 81  
Protein-protein interaction (PPI) networks, 1  
Proteomic analysis, 462  
Proteomics, 215  
Protozoa, 67  
Protozoan parasite, 256  
PSO, 243  
PSSM profile, 227
- QSAR, 88  
Quantification, 215  
Quantitation, 215  
Quantum chemical descriptors, 387
- Radial basis function (RBF), 227, 332  
Ranks, 39  
Reaction model, 5  
Receptor binding, 198  
RecQ4 sequences, 349  
Refractory period, 273  
Regular secondary structure, 406  
Rescue, 141  
RNA motif, 264  
Rotational strength, 167  
Rothmund-Thompson syndrome, 349
- $\Sigma^{70}$ , 359  
Satellite, 311  
Scale-free networks, 1  
Scleractinian, 311  
Secondary structure prediction, 302
- Sedimentation, 345  
Selected ion chromatogram, 215  
Semi-supervised learning, 438  
Serine/threonine/tyrosine kinase, 218  
Shannon H-function, 147  
Signal transduction, 218  
Simulated annealing, 248  
Simulation, 185  
Simulation model, 338  
Site identification, 400  
Small subunit rRNA, 191  
Splice variants, 111  
Spreading depression, 273  
SST, 311  
Stathmin, 141
